                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                This represents the 5' UTR (untranslated region) of the DNA that

cneedes an equilibrative nucleoside transport protein (iENTP), which
is insensitive to nitrobeacylmercaptopurine riboside (NBMRN). Cells
ctransformed with a construct containing the iENTP nucleic acid can be
cused to produce the protein recombinantly. iENTP is used to identify
cused to produce the protein recombinantly. iENTP is used to identify
considered ic ligands (particularly antiviral and antitumour nucleoside
antibodies. Cells in which iENTP permeants of iENTP and to raise
antibodies. Cells in which iENTP permeants of iENTP and (b) to screen
contibodies. Cells in which iENTP (potential drugs). Fragments of the iENTP
cucleic acid are used, as probes, primers, antisense molecules, and
cribozymes for therapy or diagnosis, and knockout mice in which both
alleles encoding iENTP contain an inactivating defect are also useful for
caruge screening. Cells that have been transduced with iENTP nucleic acid
caruge screening. Cells that have been transduced with iENTP nucleic acid
caruge screening.
caruge the iENTP gene is linked to a heterologous gene (e.g. encoding adenosine
contains and factor VIII) can be used for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ÷

The present sequence is the CDNA encoding human cyclic nucleotide associated protein-2 (CNAP-2), identified in Incyte clone 3149674, that is isolated from ADRENOVIO CDNA library. It is expressed in nervous, reproductive, cardiovascular and haematopoietic/immune tissues. CNAP sequences may be used for prevention, treatment and diagnosis of diseases associated with altered CNAP expression such as, cell proliferative disorders (e.g. arteriosclercis; cirrhosis, leukaemia, lymphoma and cancer of the breast, prostate, lung and brain), autoimmune/confined and psoriasis, neurological disorders (e.g. asthma, anaemia, diabetes mellitus, multiple sclerosis and psoriasis), neurological disorders (e.g. applepsy, conjunctivitis, glaucoma, cataracts and retinitis pigmentosa), reproductive disorders (e.g. infertility, uterine fibroids, ectopic pregnancies and impotence) and smooth muscle disorders (e.g. angina).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated cyclic nucleotide associated proteins useful for preventing, diagnosing and treating cell proliferative, autoimmune/inflammatory, neurological, vision, reproductive and smooth muscle disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         135 TAACGCCGCATCCCTGGCGCCCCACCCTGTGTCCCCCGTCCTCGAGCCCTTTAATCTGAC 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopolesis regulating activity, tissue growth activity, haematopolesis regulating chamotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          175 CTCGAGCCCTTTAATCTGACTTCGGAGCCCTCGGACTACGCTCTGGACCTCAGCACTTTC 234

The patent discloses methods for the treatment and diagnosis of cardiovascular diseases by novel human genes which are differentially expressed in different cardiovascular disease states. Compositions which can modify TGF-beta signalling pathway are identified by screening. These are used therapeutically to treat fibroproliferative and oncogenic disorders, including diabetic retinopathy, artherosclerosis, pancreatic cancer, angiogenesis, inflammation, fibrosis, tumour growth and vascularisation. The present sequence is fichd605 gene which is upergulated in monocytes treated with oxidised LDL (low density lipoprotein) can be used to design cardiovascular disease treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying substances for ameliorating symptoms of fibroproliferative diseases or oncogenic related disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..
                                                                                                                                                                                   reated with oxidised low density lipoproteins (LDL). Differential display was used to detect genes that are differentially expressed in monocytes treated so as to simulate the conditions under which comm cells develop during atherogenesis. Both fchd605 and fchd602 (see T94470) are up-regulated under the disease condition of treatment with oxidised LDL. The fchd605 gene product (see W36006) has sequence similarity to mouse gly96. The discovery of the up-regulation of these 2 genes provides a fingerprint profile, e.g. markers for the study of cardiovascular diseases, including and arterial inflammation. Methods are provided for the diagnosis, monitoring in clinical trials, screening for therapeutically effective compounds, and treatment of cardiovascular diseases based on discoveries regarding the expression patterns of novel genes fedels 1 (see T94467), fchd540 (see T94468), fchd545 (see T94469),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diabetic retinopathy; fibroproliferative disorder; artherosclerosis; TGF-beta signalling pathway; TGF, Transforming growth factor; pancreatic cancer; angiogenesis; inflammation; fibrosis; tumour growth; vascularisation; cytostatic; antidiabetic; opthalmological; ds.

vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M. A.G.E. clones 29480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo.

                                                                                                                                                                                                                                                                                                                                                                                                                 pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1

                                                                           The patent discloses methods for the treatment and diagnosis of cardlovascular diseases by novel human genes which are differentially expressed in different cardiovascular disease states. Compositions which can modify TGF-beta signaling pathway are identified by screening discretes, especially TGF (Transforming growth factor) beta related disorders, especially TGF (Transforming growth factor) beta related disorders, including diabetic retinopathy, artherosclerosis, pancreatic cancer, angiogenesis, inflammation, fibrosis, tumour growth and regularisation. The present sequence is Chid605 gene which is upregulated in monocytes treated with oxidised LDL (low density lipoprotein) can be used to design cardiovascular disease treatment strategies. Depending on whether the up-regulation has a pathogenic or protective effect treatment methods can be designed to increase or decrease the activity of the protein product of the gene.

Fond605 is a novel human gene that is up-regulated in monocytes treated with oxidised low density lipoproteins (LDL). Differential display was used to derect genes that are differentially expressed in monocytes treated so as to simulate the conditions under which (see T94470) are up-regulated under the disease condition of teatment with oxidised LDL. The Echd605 gene product (see W3606) has sequence similarity to mouse gly96. The discovery of the up-regulation of these 2 genes provides a fingerprint profile.

The study of cardiovascular diseases, including and arterial inflammation. Methods are provided for the diagnosis, and arterial inflammation. Methods are provided for the diagnosis, monitoring in clinical trials, screening for therapeutically effective compounds, and treatment of cardiovascular diseases based of diseases regarding the expression patterns of novel genes (chd602 and fchd605), fchd340 (see T94468), fchd345 (see T94469), New genes differentially expressed in cardiovascular disease -for diagnosis, drug screening and treatment of cardiovascular disease, e.g. atherosclerosis, restenosis, hypertension, etc Claim 1; Fig 5; 163pp; English. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include mutritional activity, immune stimulating or suppressing activity, activity, insume than activity, heemotactic/chemokinetic activity, chemotactic/chemokinetic activity, and and thromoblytic activity, receptor/ligand activity, tumour inhabition activity, the EST sequences are also stated to be useful for gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hematopoiesis regulating activity, tissue growth activity, hemostatic and thrombolytic chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, receptor/ligand activity, hemostatic and thrombolytic activity, receptor/ligand activity, tumour inhibition activity, the polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  193 CTCGAGCCCTTTAATCTGACTTCGGAGCCCTCGGACTACGCTCTGGACCTCAGCACTTTC 134

A00010 to A02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correfated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 n A; .

constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used a diagnosis and prognosis of diseases and disorders (e.g. identification of
                                                                                                                                                                                                                                                      pre-metastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, cancer, and colon cancer.
